

- More than 3.1 million men are living with prostate cancer in the U.S.
- It is estimated that there will be 248,530 new prostate cancer diagnoses in 2021.
- Know your risk and take appropriate action. The biggest risk factors are age, race, and family history.
- Screening for prostate cancer is quick and easy and can be done with a simple blood test and a physical exam.
- African-American men are 1.8 times more likely to develop the disease and 2.2 times more likely as white men to die of prostate cancer.
- Prostate cancer is the most common cancer diagnosis among U.S. Veterans.

LIVING WITH PROSTATE CANCER

- Exercising regularly, maintaining a healthy weight, and eating a heart-healthy diet can help reduce your risk of prostate cancer.
- Prostate cancer is the second leading cause of cancer death in men.
- Every 15 minutes another American man dies from prostate cancer.
- Knowledge is power. If you or someone you love is diagnosed with prostate cancer, learn everything you can about your diagnoses. Visit www.zerocancer.org/learn.
